The New York City Open Data Team is made up of two departments operating in tandem: The Mayor's Office of Data Analytics (MODA), led by Chief Analytics Officer and Chief Open Platform Officer Kelly Jin; and the Department of Information Technology and Telecommunications (DoITT), led by Chief Information Officer and DoITT Commissioner Jessica Tisch. MODA applies strategic analytical thinking to data to help city agencies deliver services more equitably and effectively, promotes the use of Open Data both within government and in the broader community, and works to make this data more useful and usable. DoITT provides for the sustained, efficient, and effective delivery of IT services, infrastructure, and telecommunications, and administers the content on the Open Data Portal and implements technical solutions to automate the extraction, translation and loading workflows of the City's public data. Each City agency also has an Open Data Coordinator, who serves as the main point of contact for the Open Data Team and the public, and works to identify, document, structure, and manage the agency's public datasets.

# Acknowledgements

There are so many individuals and organizations that are responsible for the continued success of the NYC Open Data program, and this is only a small sampling of those whose hard work and dedication was vital to this year's efforts to make "Open Data for All." We are especially grateful to all of the Open Data Coordinators and everyone who has used Open Data, groups that are both too numerous to list here:

# Dear New Yorkers,

In September of 2019, we marked the ten year anniversary of NYC Open Data by launching an ambitious plan to strengthen and grow the program for the next decade. NYC Open Data curates nearly 3,000 different datasets across every facet of life in New York City. To build on this robust foundation and look to the next ten years, we gathered people from within City government, across industries, and throughout NYC's civic technology community, so they could share their experience and expertise, and design this future vision alongside us. Through discussion and debate, [The Next Decade of Open Data](#) emerged, focusing on 27 key initiatives around three main themes: making open data easier to find and use, supporting the City staff who publish this data, and fostering connections between New Yorkers who are interested in learning from this data.

The year that has followed has been an unprecedented time for our City. From battling a global pandemic and economic uncertainty, to fighting for justice and equity, New Yorkers during this time have sought data to better understand the world around them to an unprecedented degree. During these past months, City staff have mobilized in new ways, often outside of their agency's traditional role. You can see the results of many of these efforts – including programs to distribute food, increase recreational space, support volunteers, encourage social distancing, and reopen businesses – reflected in the data on NYC Open Data and within the pages of this report.

At the same time, the fundamental mission that still drives our work is taking what can be complex information, generated from the operation of the largest municipal government in the country, and making it accessible to everyone: Open Data for All. Open Data is every New Yorker's digital library, one that allows them to engage on a more even footing with their government, and build online tools drawing on the information that is shared.

Fulfilling this mission would not be possible without the dedication of Open Data Coordinators, embedded in each City agency and office, whose work to identify, share, and explain this data has never been more important. It would also not be possible without the ingenuity and civic-mindedness of everyone who shares and uses this data. In the following pages, you will learn more about the efforts of our team and of both of these groups, including new datasets that have been published, new programs to reach more New Yorkers across every community, and new resources that have been created improve the supply and quality of the data we share.

The Open Data Team, composed of staff from the Department of Information Technology and Telecommunications (DoITT) and the Mayor's Office of Data Analytics (MODA), will continue to strive toward fulfilling the vision of Open Data for All, and we hope you will join us.

Sincerely,

The Open Data Team

# Strategic Plan Updates

In 2019, the NYC Open Data Team co-created the strategic plan for the next ten years of NYC's Open Data with our [Next Decade of Open Data](#). This plan encompasses 27 initiatives across three main areas: improving user experience, strengthening the City's capacity, and building communities. A year later, here are some updates on the progress to date.

Each initiative, which was previously given a short, medium or long-term timeframe, has been given a status update:

- **In progress:** Meaningful work has begun on this initiative
- **Planning:** The Open Data Team has begun to work on the planning and preparatory work necessary for this initiative
- **Future:** The Open Data Team has not yet started working on this initiative

Many of the initiatives also have additional "Status Notes" to further describe their status, or to share more detail on current plans.

# Improve User Experience

---

## What this means:

Making it easier for all New Yorkers to request, find, understand, and use data

# Improve User Experience

	Strategic Initiative	Timeline	Status	Progress Description
Provide a User-Friendly, Dynamic Platform	1. Explore an open source platform that allows for continuous design, development, piloting, and implementation of new features—while ensuring equitable access to the underlying code for this public service	Medium-term	In Progress	Started initial exploration into building more open source tools around NYC Open Data, collaborating with the Two Sigma Data Clinic to launch the Scout data discovery tool
	2. Embed platform users as stakeholders when gathering requirements for future development to ensure that a diversity of user needs are represented	Short-Term	In Progress	Conducted workshop with City agency stakeholders around defining requirements for citywide data sharing
	3. In collaboration with the Mayor's Office for People with Disabilities (MOPD), work to make the platform more accessible for people of all abilities	Short-term	In Progress	Worked with the Mayor's Office for People with Disabilities to hold an NYC Open Data Week event around accessing data with your voice, and began review of NYC Open Data accessibility
	4. Streamline communications around NYC Open Data by improving the transparency and responsiveness of our help desk for all users	Short-term	In Progress	Completed initial review of outstanding help desk inquiries, and began researching help desk platforms used by similar organizations
	5. Collect user feedback around data and metadata standards, and update to ensure standards reflect current needs	Medium-term	In Progress	Reviewed examples of existing data documentation and prepared analysis for standardizing across current and future datasets
	6. Connect Open Data to existing citywide performance reporting, allowing equitable access to the data underpinning some of NYC's reports, dashboards, and tools	Long-term	Future	The 2020 Open Data compliance reporting looks at data on agency websites, part of the groundwork for making more formal connections between website tools used for performance reporting and the underlying open data
Create a Repository for Data about New York City	7. Revamp dataset request process so the most popular requests can be prioritized to be released first	Medium-term	Future	NYC Open Data will be releasing an updated Public Dataset Requests dataset to share more information about the datasets that are most commonly requested for publication
	8. Formalize publishing process for non-City publishers such as public libraries, district attorneys, and citizen-science initiatives	Short-term	In Progress	Published Central Park Squirrel Census data, looking to this as a model for future non-City datasets

# Improving Users' Ability to Find and Connect Open Data Datasets

**Strategic Initiative: 1. Explore an open source platform that allows for continuous design, development, piloting, and implementation of new features – while ensuring equitable access to the underlying code for this public service**

After more than a decade publishing data, there are nearly 3,000 different datasets on NYC Open Data, published by more than 60 different City agencies. As data has proliferated, it's possible to find information about virtually every facet of City life – from health and transportation, to the environment and public safety.

With this wealth of information, however, it becomes more difficult to surface relevant data, find the connections between different datasets. It is also easier to miss older or lesser-known datasets, as the default views highlight either what is newly published or most frequently accessed. Browsing through datasets one-by-one isn't realistic, and even searching can be challenging if you don't know the right terms. The ability to connect datasets increases the value of each one exponentially so making it simpler to explore the relationships between different datasets is impactful.

In the fall of 2019, MODA began collaborating with [Data Clinic](#) around this challenge. Data Clinic, the pro bono data and tech for good initiative of Two Sigma,

has a mission to support social impact organizations – working extensively with open data, and seeking to solve public interest problems using open-source tools. After discussing the difficulty of finding and connecting datasets, Data Clinic started work on [scout](#), an open-source open data exploration tool. The development of scout included public feedback sessions during NYC Open Data Week, and a focus group of ODCs to get their input about how this tool might help manage the data they provide. For a quick overview of scout, take a look at the [tutorial](#). You can also check out the feature [roadmap](#), or visit [GitHub](#) to access scout's source code or contribute to its development. To share your feedback on the current tool or future direction, email Data Clinic at [dataclinic@twosigma.com](mailto:dataclinic@twosigma.com). The scout tool is just one example of the potential of open source development. If you're inspired to create a product that makes using NYC Open Data easier, [contact the Open Data Team](#).

## Making Open Data Accessible for All

**Strategic Initiative: 3. In collaboration with the Mayor's Office for People with Disabilities (MOPD), work to make the platform more accessible for people of all abilities**

The mission of the NYC Open Data is to provide meaningful access to public data to all New Yorkers. Sometimes this is as simple as making a table available with some narrative background. Usually more extensive documentation or tools, like maps, that make for easier interpretation is also necessary. With the goal of reaching more New Yorkers, the NYC Open Data Team has begun working with the Mayor's Office for People with Disabilities (MOPD) to give more people greater access to the information presented on Open Data.

During the 2020 Open Data Week Festival, MODA and MOPD worked with Immanuel Trummer, a Cornell professor of computer science and head of the Cornell Database Group, to give a [demo on accessing Open Data datasets using a voice interface](#). For more information on this work, visit the Cornell Database Group's [data vocalization project site](#). Currently, the Open Data Team and MOPD are working with Tyler Technologies, the company that provides the technical platform that powers NYC Open Data, on an accessibility review, the results of which will guide future development. To start, we are focused on making it easier for people using screen reading software to find and analyze open data.

# Strengthen City Capacity

	19. Introduce and track Open Data Key Performance Indicators (KPIs) to show the health of the program at a glance	Short-term	In Progress	Beta version of updated NYC Open Data dashboard will be shared with the public during the first half of 2021

## Empowering the People Who Power NYC Open Data

### Strategic Initiative: 9. Guide ODCs through regular training sessions for those new to the role and “office hours” for veterans

NYC Open Data would not be possible without the efforts of a community of nearly one hundred Open Data Coordinators, or ODCs, who are responsible for identifying, structuring, documenting, publishing, updating, and sharing the public datasets that their agencies and offices maintain. ODCs come to the role with different amounts of experience working with data, and most fulfill the ODC responsibilities as a complement to their primary job. Beyond facility with data, being an ODC also requires navigating legal and communication challenges inherent with translating complex administrative data for public use. Given the importance of the ODC role and varied backgrounds of ODCs, the Open Data Team has focused on establishing a common base of knowledge and providing more opportunities for ODCs to learn from each other.

After completing a survey of ODCs, the Open Data Team began planning a training program to share best practices for all aspects of the role, and explain the latest updates to the compliance process. The Open Data Team instead worked

with some of the more experienced ODCs to create a series of online training videos on topics including dataset identification and publication, civic engagement, privacy, and legal compliance. After viewing these training videos, ODCs were also able to share their questions via an online form and join a virtual training session. The virtual training targeted the most common questions and featured a panel discussion with some veteran ODCs, who shared their tactics for success in the role and reflected on the impacts of COVID-19 on their work.

Following the training, the Open Data Team held virtual “office hours” to help resolve any remaining challenges ODCs encountered, especially around the annual compliance process. Building on this effort, the Open Data Team will continue to create documentation around the ODC role, create opportunities for ODCs to learn from each other, and offer structured time for ODCs to explore questions they have or problems they face.

## An Update on Updating Datasets

### Strategic Initiative: 12. Improve dataset automation process and technology support, making it easier for agencies to keep their datasets up to date

Data is more valuable the more closely it reflects reality, and NYC Open Data is no exception. From [knowing which streets have been plowed after a snowstorm](#) to [learning when the tree next door was planted](#), to [finding the nearest affordable housing development](#), up-to-date data is important. When we started adding datasets to the Open Data portal, now more than a decade ago, most were either loaded manually or loaded automatically through a custom script written by a developer or data engineer.

In 2019, we committed to improve the data automation process, reducing the number of both manually loaded and custom automated datasets. We did so to make it easier for City agencies to keep their data up-to-date, and allow everyone to more consistently find current, accurate data when looking at NYC Open Data. At the time, approximately 9% of datasets eligible for automation were being updated automatically.

Since then, DoITT staff have begun using automation tools to expedite and simplify the process of automating most datasets, eliminating the need for custom scripts in nearly all cases. As a result of this work, more than 50% of datasets that can be automated are now automated. In the coming years, we will continue to push for new tools to automate an even larger proportion of datasets, increase the distribution of automation tools to individual agencies, and work with agency ODCs to move manually updated datasets to more modern workflows.

## Identifying New Datasets for Publication

### Strategic Initiative: 13. Redesign how we identify new data for publication so that more public datasets are being shared

During the annual compliance review, Open Data Coordinators (ODCs) report on and commit to publish new datasets their agencies have created, adding to the library of data available on NYC Open Data. This year's compliance efforts are consolidated in a table at the end of this report, and you can see the results of past year's efforts [on our website under "Laws and Reports."](#)

With the goal of ensuring that every dataset that can be shared with the public is being shared, and data that agencies make available elsewhere is consolidated on NYC Open Data, this year's report will include a new inventory of datasets found on City agency websites. As part of the inventorying process, ODCs verified if datasets on their websites were currently available on NYC Open Data. For datasets not yet available on Open Data, agencies committed to a date when the data would be published, or provided a public explanation of why

the data could not be shared. As a result of this new process, more than 270 datasets are scheduled to be published in this year's compliance plan, over a two-thirds increase from 2019.

This process was informed by the reviews of agency data that MODA conducted between 2016 and 2018, under Local Law 8 of 2016, known as Open Data Examination and Verification. These reviews were designed to improve compliance with the Open Data Law and help ODCs systematically identify new datasets. In future years, datasets shared on City websites will continue to be integrated into annual compliance reporting. This will be supplemented by additional methods of identifying new datasets, including looking at [Mayor's Management Report](#) indicators and agency technical systems, that will be phased in to this same reporting.

## Updating Our Standards and Best Practices

### Strategic Initiative: 16. Update open data policy guidance in the Technical Standards Manual to better address internal data coordination, data quality standards, and self-publishing processes

NYC Open Data collates information from many types of data sources – ranging from maps and tables, to interactive reports and databases – across New York City’s government. With the wide variety of data being shared, promoting standards and sharing common practices is crucial. One of the ways the NYC Open Data Team elevates these standards and practices is by publishing a Technical Standards Manual (TSM). This manual, which is also required by law, is available to anyone who wants to better understand the decisions that are made when data is identified, documented, published, and maintained.

In the first half of 2020, the Open Data Team engaged in an effort to update, reorganize, and redesign the TSM. The new edition will be reformatted to highlight how policies, guidance, and technical standards apply throughout the entire lifecycle of a dataset, and written especially to provide official guidance to Open Data Coordinators. While we are still finalizing these revisions, we look forward to sharing the new manual publicly in the coming months.

## Sharing the Tools and Measures We Use to Assess Datasets

### Strategic Initiative: 19. Introduce and track Open Data Key Performance Indicators (KPIs) to show the health of the program at a glance

In 2009, when the first datasets were published on NYC Open Data, one of our initial goals was to publish as much data as possible. Our first measure of success was a relatively simple one: the number of datasets and rows of data. Over time, and as more data from the agencies and offices in NYC government has been shared, we have begun to look at additional measures, focused increasingly on data quality. The challenge is that there was not a standardized set of indicators available to evaluate the strength of the data being shared.

During the first half of 2021, we intend to release a beta version of a new public dashboard with a standardized set of key performance indicators. To start, we are focusing on the supply of data. Is new data being published near its scheduled publication date?

Is existing data being updated on at least the specified update frequency? Is the metadata, which explains what the data represents and how one might use it, being properly recorded?

The Open Data team is collecting ODC feedback on the dashboard and will be posting an update on NYC Open Data when the beta dashboard is available publicly. We welcome anyone with suggestions now to share them through the [NYC Open Data Help Desk](#).

## Celebrating How NYC Runs on Open Data Across the Five Boroughs

**Strategic Initiative: 26. Continue to grow the annual Open Data Week celebration**

The fourth annual NYC Open Data Week kicked off on February 28, 2020, aiming to advance open government, technological literacy, and civic engagement through fun, thought-provoking, and mostly free events. More than 2,000 New Yorkers gathered at over three dozen events across the five boroughs, learning about NYC Open Data and how it can empower their organizations and communities.

The festival is led by the team at MODA, in partnership with the local civic tech nonprofit BetaNYC. This year's festival featured dozens of events hosted by 18 City agencies, more than 40 independent organizations, including academic institutions, companies, nonprofits, and individuals – all with a shared interest in teaching people more about NYC. The week kicked off with the opening night of Data Through Design's "Digital Twin" art exhibition, and concluded with BetaNYC's [School of Data community conference](#).

Open Data Week event organizers were able to apply their unique and diverse perspectives on NYC Open Data, which came to life in the wide range of event formats and topics, including a squirrel counting expedition, a scavenger hunt, and data-themed arts and crafts. Events also addressed specific topics such as the provision of social services, transportation, real estate, and public health. To view a full calendar of the 2020 events, [visit open-data.nyc](https://open-data.nyc). While Open Data Week 2021 is likely to include more virtual and socially-distanced events than previous years, we encourage you to share any suggestions you have by emailing [team@open-data.nyc](mailto:team@open-data.nyc).

# Dataset Highlights

From July 1, 2019 through June 30, 2020, over 40 City agencies published more than 200 new datasets on NYC Open Data. Some of these datasets were part of the plan released with last year's report, while other datasets were newly created or newly identified during the course of the year. These are just some of the highlights among the new datasets that were published. To see a complete listing of every dataset on NYC Open Data, and when it was published, visit our [asset inventory](#).

## Open Streets Locations

Published by: Department of Transportation

New York City is opening streets to allow for greater social distancing during the COVID-19 pandemic, with a plan to expand to a total of 100 miles. The streets are open daily from 8 a.m. to 8 p.m., unless otherwise noted, for pedestrians and cyclists to use the roadbed of the streets while maintaining at least six feet of distance from others. The Open Streets initiative is a collaboration between the Mayor's Office, NYC Council, NYPD, Parks, NYC DOT, Business Improvement Districts (BIDs), and local community organizations. The initiative includes Open Streets: Restaurants, Open Streets: Play, and Cool Streets. Visit [nyc.gov/openstreets](https://nyc.gov/openstreets) for more information.

## Open Restaurants Applications and Open Restaurants Inspections

Published by: **Department of Transportation**

NYC's Open Restaurants Program is an effort to implement a citywide multi-phase program to expand outdoor seating options for food establishments to promote open space, enhance social distancing, and help restaurants to recover.

The Open Restaurants Applications data is collected through a web form and each row is populated with information from a food service establishment that applied for outdoor seating either on the sidewalk or roadway including Open Streets Locations. This data can be used to determine which food service establishment has outdoor sidewalk and/or roadway seating.

The Open Restaurants Inspections dataset contains site inspection results performed on Open Restaurants throughout New York City.

These datasets can be used to determine which food service establishment has outdoor sidewalk and/or roadway seating, and if a food service establishment participating in the Open Restaurants Program is complying with the Open Restaurants Program rules.

Visit [nyc.gov/openrestaurants](http://nyc.gov/openrestaurants) to learn more about the program, or to apply to be an Open Restaurant.

## Bedbug Reporting

### **Published by: NYC Housing Preservation and Development**

The Department of Housing Preservation and Development (HPD) promotes the quality and affordability of the city's housing and the strength and diversity of its many neighborhoods. In order to comply with local law, all multiple dwelling property owners in NYC are required to disclose bedbug occurrence in any buildings they own. HPD has consequently been able to create a comprehensive [Bedbug Reporting](#) dataset available on NYC Open Data. This data is self-reported by property owners, who compile the information based on tenant-supplied information and their own knowledge, and reflects only the most recent filing. Any New Yorker can become empowered to make more informed decisions about their housing by typing an address into the filter tool available on the [dataset webpage](#).

## Internet Master Plan Broadband Access

Published by: **Mayor's Office of the Chief Technology Officer**

The Internet Master Plan is an initiative to expand broadband internet access to every neighborhood of New York City. Addressing barriers to economic and social inclusion in the digital era will give New Yorkers the high-quality internet access important for remote work, using government services, and accessing healthcare – especially during the COVID-19 pandemic.

The Internet Master Plan Broadband Access dataset has been crucial to identifying underserved communities and prioritizing work to bring them online. The dataset synthesizes informa-

tion from government agencies to identify existing broadband infrastructure across the city and show where the digital divide is most significant. It includes information on the adoption rates for home and mobile broadband, as well as on the availability of public computers and Wi-Fi hotspots throughout the city.

To learn more about the Internet Master Plan, read the full report, and explore various datasets on the topic, visit [nyc.gov/cto](https://nyc.gov/cto).

## Environmental Entitation

**Published by: Department of Parks & Recreation**

While many people might be inclined to think of skyscrapers and bustling streets when it comes to New York City’s landscape, NYC Parks oversees more than 10,000 acres of forest, woodland, freshwater wetland, and salt marsh. Maintaining these areas is only possible with a thorough understanding of the complex ecosystems within them. In order to take inventory of these natural areas, starting in the 1980s, NYC Parks’ Natural Resources Group developed a process called entitation, which involves identifying and describing discrete vegetation units, or entities.

The data collected during the entitation process is available in the form of a [dataset](#) on NYC Open Data and includes data from select years between 1986 to 2012. Not only does it contain precise spatial data regarding each of the entitation units surveyed, it also includes a naturalist’s trove of information about their general characteristics and the plant species that can be found within each unit. Parks uses this data to monitor potentially destructive invasive species, inform the development of the [Forever Wild program](#), and help external organizations working to conserve the natural environment in New York City.

To get involved with conservation in New York City, check out the [Natural Areas Conservancy](#) and see how young people are getting involved with this work through the [Ranger Conservation Corps](#).

## COVID-19 Health Data

**Published by: NYC Department of Health and Mental Hygiene**

In the extraordinary circumstances of battling a global pandemic, the Health Department uses epidemiological data to inform NYC's response. Some of this same data is publicly shared through a collection of different datasets on NYC Open Data, including [COVID-19 cases, hospitalizations, and deaths](#); [testing cohort outcomes](#) for people tested for COVID-19 on a certain date; and the number of people visiting or admitted to emergency departments with the [flu or pneumonia-like symptoms](#) associated with COVID-19.

Much of this data is presented using modified zip code tabulation areas, a geography created by the Health Department to communicate data about different communities within NYC with familiar zip codes, while combining areas with small populations to ensure that New Yorkers' privacy is protected. For more information on COVID-19 data and indicators, visit the [Health Department's Github page](#), and for the latest guidance, visit [nyc.gov/coronavirus](https://nyc.gov/coronavirus).

# Civic Engagement Highlights

When making data publicly accessible, sharing the data itself is only the starting point in a larger process of continuous engagement. Beyond publishing datasets, Open Data Coordinators are responsible for answering questions about and actively promoting the data their agency has made available. Someone looking for information about the environment, or health, or public safety, or transportation, for example, might not think of going to Open Data first, but we want to ensure they still find the information they're looking for. With this pathway in mind, each agency with publicly available datasets is required to engage with the public around this data and foster its active use.

The Open Data program began requiring engagement activities in 2018, and has reported for the last two years on commitments that agencies made to

complete different types of engagement activities in the coming year. Starting with this year's report, we will instead be reporting on civic engagements that were completed during the past year. With this shift in perspective, this year's report will only reflect engagement activities completed between September 15, 2019 and April 30, 2020. Our next report will reflect a full year's worth of engagement, from May 1, 2020 through April 30, 2021. Even with this year's reduced reporting period, Open Data Coordinators completed more than 130 different engagement activities: making public presentations, adding open data to reports, creating references for those using their data, and sharing news when new data is available. Some highlights are available on the following pages, and you can see more information about all of the completed civic engagements starting on page [39](#) Compliance Tables.

## Connecting New Yorkers to Public Benefits

**Published by: The Mayor’s Office for Economic Opportunity (NYC Opportunity)**

The Mayor’s Office for Economic Opportunity (NYC Opportunity) uses evidence and innovation to reduce poverty and increase equity. It advances research, data, and design in the City’s program and policy development, service delivery, and budget decisions. The office’s [product team](#) oversees the development of public facing web applications, internal tools, open data initiatives, and proofs of concept.

One of these products is the NYC Benefits Platform, an open data-based initiative that aims to support organizations that make it easier for NYC residents to discover the benefits they may be eligible for through two open resources including:

- [The Benefits and Programs Dataset](#): Plain-language, standardized information for over 80 government benefits and programs, hosted on NYC Open Data.
- [The Benefits Screening API](#): Machine-readable calculations and criteria for over 30 government benefits and programs.

For Open Data Week 2020, NYC Opportunity hosted several workshops to introduce these resources and generate ideas that could be explored further for real life use cases. During the workshops, participants competed in a Benefits and Programs Dataset “Scavenger Hunt” to find specific eligibility information about certain programs, and to win prizes!

The NYC Benefits team demonstrated how anyone could use specially formatted CSV files to interact with the Benefits Screening API, sending anonymous household information in bulk to receive screening results without the need for technical development or knowledge of programming languages.

## Sustainability Uses of NYC Open Data

**Completed by:** Department of Environmental Protection

As part of Open Data Week 2020, City College's Sustainability in the Urban Environment program hosted representatives from the Department of Environmental Protection (DEP) and Department of Parks & Recreation for a presentation on open data and its applications for promoting environmental sustainability in New York City. Presenters from DEP explained how rainfall & weather data is driving evolving perspectives on green infrastructure, and how [New York City's green infrastructure program](#) is in turn helping to mitigate extreme flooding and improve the City's resilience against the negative effects of climate change.

Additionally, DEP discussed its long-term goals for water conservation in the City. Since 2013, the City's conservation program has reduced NYC's demand for water by 10 million gallons of

water per day (MGD), and hopes to reduce this demand by another 10 million MGD before 2022. Open data has also had a major role in this project, helping DEP to identify water fixtures to be replaced in buildings across the City, detect leaks and and better manage water pressure, and track NYC's largest users of water in order to better tailor City infrastructure to their individual water systems. Check out [an interactive map](#) detailing this effort, and visit [DEP's website](#) to learn more about how you can help prevent flooding and conserve water in New York City.

# Moving from NYC Data to Data About NYC

With our mission of making public data accessible to all New Yorkers, one of our core principles is that we should not expect the people who use this data to be experts in it. Though some who use Open Data might have deep knowledge of the topic they are exploring, anyone who can benefit from this data should be able to use it. And with a wide range of data about the workings of their government, every New Yorker can benefit from using NYC Open Data. The value of this access is why City agency Open Data Coordinators are engaged to translate the data and create accompanying documentation to explain it, communicating their insight into the intricacies of their agency's operation for public use.

One of the limitations of NYC Open Data is that it reflects only the data from City government, while anyone using Open Data really wants to see authoritative data – regardless of source – about New York City. The distinctions of who creates the data, and how they relate to the other organizations within and outside our City, are important, but should not be a barrier to publishing non-City data. Building on this idea, and the initiatives in our 2019 Strategic Plan, we published the results of the [Central Park Squirrel Census](#) as an example of authoritative data from outside the City's government.

As squirrels are one of the seemingly always-present animal residents of NYC's parks, every New Yorker is familiar with them, but there has not previously been much data on squirrels available. [The Squirrel Census](#) is a multimedia science, design, and storytelling project focusing on the Eastern gray squirrel. And during 700 squirrel-counting sessions in the fall of 2018, the Squirrel Census – with the help of 323 volunteer Squirrel Sighters, The Explorers Club, NYU's Department of Environmental Studies, CUNY's Macaulay Honors College, the Central Park Conservancy, and New York City Department of Parks & Recreation – counted the squirrels in Central Park, gathering more than 3,000 pages of tally sheets. As a result, this new collection of data includes the [counts of squirrels](#), but also data like [the squirrels' fur color](#) and stories about their behavior.

By adding these new datasets on squirrels, many who would find government operational data daunting picked up this dataset and some, after examining the squirrel data, found themselves using other datasets on NYC Open Data as well. With this in mind, the NYC Open Data team will continue to seek out definitive data sources about New York City from beyond City government to make our collection of NYC data more complete and more approachable. And, if you have a suggestion for a dataset, either yours or someone else's, that could improve our inventory, [let us know!](#)

# Powered by NYC Open Data

With nearly 3,000 datasets available on NYC Open Data, knowing where to start can sometimes be daunting. And since a fundamental component of open data is that it is free for anyone to use, for any purpose, it can be challenging to see where others started with the same questions or data. [The Open Data Project Gallery](#) collates examples of how others, from data novices to experienced professionals, have used the data shared on NYC Open Data to answer questions, build tools and apps, or create data visualizations.

One of the most impactful results of publishing a dataset is when the data is used in a new way that was never anticipated. In some cases, this new use was not possible to imagine at the time data was published. The creative re-use of open data expands the value of the dataset by incorporating the knowledge and unique perspective of the person using the data. A powerful recent example of the value of building on available open data was Meli Harvey's creation of the [Sidewalk Widths NYC map](#), which depicts the relative difficulty of social distancing based on the width of each stretch of sidewalk in NYC.

As a computational designer, with an academic background in architecture and urban planning, Harvey has long focused on how to "rationalize, model, and build very complex structures," working with artists, planners, and data scientists to both model real-world structures virtually, and fabricate digital designs in physical form. With the onset of the COVID-19 pandemic, she thought about building a tool to communicate social distancing. When Harvey began looking for data,

she did not find data that fit what she was looking for exactly, but instead began using a [dataset first published in 2014, showing the outlines of every sidewalk in NYC](#). Starting with this data, Harvey calculated the width of each of the sidewalk segments, and mapped them, adding a color to indicate the relative difficulty of social distancing. Harvey's work inspired similar efforts from around the country and around the world, including Washington DC, Toronto, Berlin, and much of Italy.

Harvey has some tips for those newer to working with data, suggesting that anyone can "become comfortable with data with very easy to use software, like Excel or [QGIS](#)." "I generally start projects with a Google search. If you don't know the dataset you're using, or what you're doing with it, start with your idea or area of research. After looking through the data you can form a question that's appropriate, that the data can answer."

If you're looking for inspiration, you can see Harvey's project and others on the [project gallery](#). And if you have a project you've created using NYC's Open Data, we encourage you to [submit it to potentially be featured](#).

# Data About Open Data

NYC Open Data offers thousands of different data-sets, but here is some data about our work over the past year (July 2019 through June 2020). We will also be sharing more data, including some of our updated key performance indicators with the release of a new dashboard during the first half of 2021. See page [18](#) for more details, and keep an eye on [nyc.gov/opendata](https://nyc.gov/opendata)

## Unique Visitors Per Month

2020

142,000

2019

119,000

With a **19%** increase in unique monthly visitors from last year, data about NYC is more sought out than ever before. In April of 2020, we had a new record of nearly 200,000 unique visitors.

Each person represents 10,000 unique visitors.

# Next Stop, New York City

While over half of the visitors to NYC Open Data come from NYC, more than 1 in every 10 comes from outside the United States. This map shows an overview of where NYC's data was most popular around the world. The more intense colors indicate greater numbers of visitors.

## Top 10 International Cities Using NYC Open Data

5. Citywide Payroll Data (Fiscal Year)

Note: Ranking is ordered by dataset views during Fiscal Year 2020 (July 1, 2019 through June 30, 2020). Datasets were grouped such that, if over 75% of the title of a dataset is the same as an already existing dataset in the top 5, the second dataset will not be counted again in this list, and the title of the first dataset will be edited to reflect both datasets generally.

# The Year in NYC Open Data

2019

## August

### Designing the Future of NYC Open Data

After an earlier public survey campaign to better recognize New Yorker's information needs in all five boroughs, the Open Data Team convened a two-day co-design workshop where more than 60 participants addressed common challenges, surfaced opportunities, and helped prioritize key initiatives for the Open Data program.

## September

### Open Data Team Welcomes Inaugural City Service Corps Member

Hope Vaughn joined the Open Data Team and MODA as a City Service Corps member for nearly 10 months of service. During her tenure, Hope helped to manage the NYC Open Data help desk, plan for NYC Open Data Week 2020, and organize the May 2020 Open Data Coordinator training.

### Project Manager Joins MODA to Support the Open Data Program

Małgorzata Rejniak joined the Open Data Team and MODA as Project Manager to support all aspects of the NYC Open Data program.

### Next Decade of Open Data Strategic Plan Released

The Open Data Strategic Plan was released as part of the Next Decade of Open Data 2019 Open Data for All Report. The plan's 27 strategic Initiatives are intended to guide the program's priorities and work in the near, medium, and long-term over the next 10 years.

## October

### Non-City Data from the Squirrel Census is Published

As we continue to look to expand the sources of information available on NYC Open Data, the Open Data Team partnered with the Squirrel Census, a multimedia science, design, and storytelling project, to publish the Central Park Squirrel Census 2019 Report on NYC Open Data. Publishing this data also allowed us to test how we document and present non-City data.

## December

### "Data Counts" Pilot Program with BetaNYC and Queens Library Concludes Inaugural Trainings Led by a New Corps of Open Data Ambassadors

BetaNYC, MODA, and the Queens Library gathered to celebrate the efforts of the successful conclusion of the inaugural Open Data Ambassadors program, where volunteer Ambassadors led trainings in library branches in every community board of Queens. The Ambassadors used a curriculum designed by BetaNYC to teach people about NYC Open Data and raise awareness about Census 2020.

### NYC Open Data publishes final Examination and Verification Report

MODA published a report concluding its series of three annual examinations of City agencies, pursuant to Local Law 8 of 2016, Open Data Examination and Verification. The examinations were intended to improve agency compliance with the Open Data Law by creating a systematic way to locate datasets that may have been omitted in agencies' self-reported Open Data compliance plans. This effort was used to inform the 2020 Open Data compliance reporting process.

January

**Second Meeting of the Open Data Advisory Council**

The Open Data Advisory Council gathered for the second time to share their expertise and guidance on strategically significant initiatives including Open Data Week 2020, enhancements to the 2020 Open Data Compliance Process, and Open Data Coordinator Training.

February

**Data Through Design Art Exhibition opens**

Open Data Week 2020 kicked off with the opening night of the Data Through Design art exhibition celebrating tangible and multi-media expressions of New York City's Open Data. The objective of the week-long exhibit was to enable technologist, artists, and designers to create novel methods of map-making, present new narrative perspectives, and develop a deeper understanding of life in the city using data as a medium. The theme of this year's event was Digital Twin, a term used to describe a virtual replica of a real world object or phenomenon.

March

**Open Data Week & School of Data**

Between February 28 and March 7, 2020, over 2,000 New Yorkers gathered at more than three dozen events across the five boroughs to participate in the fourth NYC Open Data Week 2020, a festival celebrating New York City and the public data available on NYC Open Data.

New Yorkers of all ages and levels of familiarity with data were able to join a squirrel counting expedition, embark on a scavenger hunt, get creative at a data-themed arts and crafts event, and explore numerous tools for data visualization.

Open Data Week 2020 concluded with School of Data, BetaNYC's annual day-long community conference, bringing New Yorkers together to discuss open data, civic technology, privacy, smart cities, open government, and service design.

April

**Open Data responds to COVID-19**

Working together with staff from across the City – including the Department of Health and Mental Hygiene, Department of Education, Department of Information Technology & Telecommunications, Department of Parks & Recreation, and Department of Transportation – the Open Data Team published datasets related to COVID-19 and the City's response.

May

**Open Data Coordinator Training**

The Open Data Team conducted a comprehensive online training for Open Data Coordinators (ODCs). Prior to the live training, the Open Data Team worked with more experienced ODCs to prepare a suite of online training videos on different aspects of the ODC role and the annual compliance process.

Department of Health and Mental Hygiene (DOHMH)	Transportation-related Injuries	Rates of traffic injuries provided here are based on all live transportation-related injury discharges from a NYC hospital and include emergency department visits and hospitalizations among residents and non-residents of NYC. Neighborhood data are based on zip code of residence for NYC residents only who were discharged from a hospital located in NYC. Crash locations are not available in these data. Visits to emergency departments and hospital stays reflect injuries that require immediate medical treatment. Minor injuries not treated at a hospital are not captured through emergency department and hospitalization data. Data were obtained from the New York State Department of Health Statewide Planning and Research Cooperative System (SPARCS). Transportation-related injuries are defined by the International Classification of Diseases, Clinical Modification (ICD-10-CM) and were recently revised. The revisions largely pertain to injury-related diagnostic codes including those that capture transportation-related injuries, allowing for better diagnosis. The Centers for Disease Control and national epidemiologists provided guidance to DOHMH for enumerating new injury codes. Because the two ICD systems differ in how they classify injuries, current data and previously posted data are not comparable. Data prior to 2016 are not shown because they use the older coding ICD-CM schema	Biennially	6/30/2021	New

Department of Health and Mental Hygiene (DOHMH)	Communicable Disease Surveillance Data	Results of surveillance data collected by the agency	Annually	12/31/2020	<p>The NYC DOHMH Division of Disease Control is requesting the removal of the Communicable Disease Surveillance Data that is currently posted on NYC Open Data Portal. The EpiQuery module from which this dataset's current and historical crude and age-adjusted rates are manually extracted is updated whenever a new population estimate (denominator) becomes available. For example, when vintage 2016 population estimates become available, EpiQuery updates 2014 and 2015 rates. As a result, rates change for historical years, creating discrepancies between Open Data and current EpiQuery.</p> <p>The program requests that the Open Data module remains fully consistent with the EpiQuery module. However, to update the Open Data module would require the team to manually update the Open Data source file for all 10 communicable diseases and all years that are currently listed, which the program currently does not have the bandwidth for. Instead, the program will provide additional data from Annual Reports and other special reports that contain the same surveillance indicators.</p> <p>In the interim, interested users should visit the Communicable Disease Surveillance Data module on EpiQuery for the most current data: <a href="https://a816-healthpsi.nyc.gov/epiquery/CDSS/index.html">https://a816-healthpsi.nyc.gov/epiquery/CDSS/index.html</a>. Thank you.</p>

# Website Data

This table contains a listing of datasets shared on agency websites. Note that the number of datasets on agency websites does not directly match the number of datasets posted on Open Data. In some cases, annual updates to a dataset are posted on an agency website, with separate files for each year, while the same span of data will be consolidated in a single dataset on Open Data. For datasets in this table that are listed as being “Scheduled for Publication,” multiple entries in this table might correspond to a single entry in the future releases listed in the Open Data Plan table.

Department of City Planning (DCP)	Community Development Block Grant (CDBG)	The U.S. Department of Housing and Urban Development (HUD) requires local municipalities that receive Community Development Block Grant (CDBG or CD) formula Entitlement funds to use the 2011-2015 American Community Survey (ACS) Low and Moderate Income Summary Data (LMISD) data file, released February 14, 2019, to determine where CDBG funds may be used for activities that are available to all the residents in a particular area ("CD area benefit" or "CD-eligible area"). A CD-eligible census tract refers to 2010 census tracts where the area is primarily residential in nature and at least 51.00% of the residents are low- and moderate-income persons as per the LMISD data file. For New York City, a primarily residential area is defined as one where at least 50.00% of the total built floor area is residential. Low- and moderate-income persons are defined as persons living in households with incomes below 80 percent of the area median household income (AMI). (The New York Primary Metropolitan Statistical Area (PMSA)'s AMI was \$63,700 for a 4-person family at the release of the 2011-2015 American Community Survey.)	<a href="https://www1.nyc.gov/assets/planning/download/office/data-maps/census-tract-eligibility-2019.xlsx">https://www1.nyc.gov/assets/planning/download/office/data-maps/census-tract-eligibility-2019.xlsx</a>	Annually	Yes	<a href="https://data.cityofnewyork.us/Housing-Development/Community-Development-Block-Grant-CD-BG-Eligibility/3u5q-ae5y">https://data.cityofnewyork.us/Housing-Development/Community-Development-Block-Grant-CD-BG-Eligibility/3u5q-ae5y</a>	N/A

Department of City Planning (DCP)	Metro Region Explorer - Municipality	The municipality geography represents approximations for cities, towns, and villages within the NYC metropolitan region. The boundaries represent U.S. Census Bureau Minor County Division (MCD) geographies for all counties in New Jersey, Connecticut, and the Hudson Valley; U.S. Census Bureau Places (Places) boundaries for Long Island, unless otherwise noted; and, to represent NYC at municipality-comparable scale, DCP used the sub-borough geographies defined in the 2013 edition of The Newest New Yorkers report, "Chapter 3: Settlement Patterns". NYC geographies represent aggregations of U.S. Census Bureau Public Use Microdata Areas (PUMAs). It is important to note that "municipalities" represented in this tool do not imply or consistently represent jurisdictional boundaries or governance authority. The purpose of this geography is to enable consistent longitudinal socioeconomic analysis across the region at comparable scale. When changes were detected within the study period (e.g., consolidation, renaming), data were recoded. However, it is possible that inaccuracies in the data reflect additional changes to municipal borders or Census-defined geographic entities over this period. Municipality data are not visualized for select maps due to availability limitations or reliability concerns (more about data reliability).	<a href="https://planninglabs.carto.com/api/v2/sql?filename=municipality&amp;q=SELECT%20%2A%20FROM%20region_municipality_v20190911&amp;format=SHP">https://planninglabs.carto.com/api/v2/sql?filename=municipality&amp;q=SELECT%20%2A%20FROM%20region_municipality_v20190911&amp;format=SHP</a>	As Needed	No		No	This data was generated from Census Data (already publicly available) and the tables used in the application are available for download within the application. Department of City Planning (DCP)	Metro Region Explorer - Region	The tri-state NYC metro region geography represents New York City and 26 surrounding counties in portions of New York, north New Jersey and southwest Connecticut. This definition of the region is a generally accepted modification of the U.S. Census Bureau combined statistical area (CSA) for New York-Newark-Bridgeport and roughly represents the NYC commuter shed. This area does not represent a regulatory or other jurisdictional boundary. The region geography is not visualized as a single entity in Metro Region Explorer, but data are reported for all characteristics in the tool and the shapefile is available for download	<a href="https://planninglabs.carto.com/api/v2/sql?filename=region&amp;q=SELECT%20%2A%20FROM%20region_region_v20190911&amp;format=SHP">https://planninglabs.carto.com/api/v2/sql?filename=region&amp;q=SELECT%20%2A%20FROM%20region_region_v20190911&amp;format=SHP</a>	As Needed	No		No	This data was generated from Census Data (already publicly available) and the tables used in the application are available for download within the application. Department of City Planning (DCP)	Open Data - (E) Environmental Designations	The (E) Designations data set is provided as a free download in ESRI Shapefile and CSV formats. This dataset contains (E) Designations, including CEQR Environment Requirements (Table 1) and CEQR Restrictive Declarations (Table 2), in Appendix C of the Zoning Resolution. An (E) Designation provides notice of the presence of an environmental requirement pertaining to potential hazardous materials contamination, high ambient noise levels or air emission concerns on a particular tax lot. For more information see E-FAQ. While representative of the information contained in the Zoning Resolution, this data set is not intended to replace or supersede the information in the Zoning Resolution, but to provide an additional source of zoning information for the general public's use in digital mapping and analysis applications.	<a href="https://www1.nyc.gov/site/planning/data-maps/open-data/dwn-edesignations.page">https://www1.nyc.gov/site/planning/data-maps/open-data/dwn-edesignations.page</a>	Monthly	Yes	<a href="https://data.cityofnewyork.us/Environment/E-Designations-shapefile/mzjp-98aw">https://data.cityofnewyork.us/Environment/E-Designations-shapefile/mzjp-98aw</a>	N/A

Department of City Planning (DCP)	Open Data - Community Development Block Grant (CDGB) Eligibility by Census Tract	Community Development Block Grant (CDBG) eligible and ineligible census tracts. The U.S. Department of Housing and Urban Development requires local municipalities that receive CDBG formula entitlement funds to use the 2011-2015 ACS LMISD data file to determine where CDBG funds may be used for activities that are available to all the residents in a particular area. A CD-eligible census tract refers to 2010 census tracts where the area is primarily residential and at least 51.0% of the residents are low- and moderate-income as per the LMISD data file. For New York City, a primarily residential area is defined as one where at least 50.0% of the total built floor area is residential as determined by PLUTO 18v2.1. Low- and moderate-income persons are defined as persons living in households with incomes below 80 percent of the area median household income (AMI). The New York Primary Metropolitan Statistical Area's AMI was \$70,300 for a 4-person family at the release of the 2011-2015 American Community Survey.	<a href="https://www1.nyc.gov/assets/planning/download/zip/data-maps/open-data/cdbg_census_tracts_fgdb_201906.zip">https://www1.nyc.gov/assets/planning/download/zip/data-maps/open-data/cdbg_census_tracts_fgdb_201906.zip</a>	As Needed	Yes	<a href="https://data.cityofnewyork.us/Housing-Development/Community-Development-Block-Grant-CD-BG-Eligibility/3u5q-ae5y">https://data.cityofnewyork.us/Housing-Development/Community-Development-Block-Grant-CD-BG-Eligibility/3u5q-ae5y</a>	N/A

Department of City Planning (DCP)	Open Data - Facilities Database (FacDB)	<p>The Department of City Planning aggregates information about 35,000+ facilities and program sites that are owned, operated, funded, licensed or certified by a City, State, or Federal agency in the City of New York into a central database called the City Planning Facilities Database (FacDB). These facilities generally help to shape quality of life in the city's neighborhoods, and this dataset is the basis for a series of planning activities. This public data resource allows all New Yorkers to understand the breadth of government resources in their neighborhoods.</p> <p>This dataset is now complemented with the Facilities Explorer, a new interactive web map that makes the data more accessible and allows users to quickly filter the data for their needs. Note to Users: FacDB is only as good as the source data it aggregates, and the Department of City Planning cannot verify the accuracy of all records. Please read more about specific data and analysis limitations before using this data. Limitations include missing records, duplicate records, and the inclusion of administrative sites instead of service locations. Department of City Planning (DCP)	Open Data - Sidewalk Cafes	This feature class is a spatial representation of the Sidewalk Cafe regulations in the New York City Zoning Resolution, Chapter 1, Article 4. The Cafe-Type field indicates the types of Sidewalk Cafes that are permitted: All Cafes (includes Enclosed, Unenclosed, and Small), Unenclosed Only (includes Small), Small Only, Not Permitted (for locations where the zoning would normally permit, but some other regulation prohibits.) Lines are coincident with the Department Of Finance Tax Block edges. This dataset is maintained to reflect changes to mapped zoning districts or zoning text amendments as they are adopted by the City Council.	<a href="https://www1.nyc.gov/assets/planning/download/zip/data-maps/open-data/nycgissidewalkcafe_202004shp.zip">https://www1.nyc.gov/assets/planning/download/zip/data-maps/open-data/nycgissidewalkcafe_202004shp.zip</a>	Monthly	Yes	<a href="https://data.cityofnewyork.us/City-Government/Sidewalk-Caf-Regulations-GIS-Shapefile/qsuf-mgjh">https://data.cityofnewyork.us/City-Government/Sidewalk-Caf-Regulations-GIS-Shapefile/qsuf-mgjh</a>	N/A

Department of City Planning (DCP)	Population Fact-Finder - Neighborhood Tabulation Areas (NTA)	Neighborhood Tabulation Areas (NTAs) were created to project populations at a small area level, from 2000 to 2030 for PlaNYC, the long-term sustainability plan for New York City. Since population size affects the error associated with population projections, these geographic units needed to have a minimum population, which we determined to be 15,000. This criterion resulted in combinations of neighborhoods that probably would not occur if one were solely designating boundaries of historical neighborhoods. Moreover, the neighborhood names associated with the neighborhood tabulation areas are not intended to be definitive. Another feature of the sustainability plan, was the creation of projections for Public Use Microdata Areas (PUMAs), which are approximations of New York City's Community Districts developed for use with the Census Bureau's Public Use Microdata Samples (PUMS). In order to make the boundaries consistent with PUMAs, NTAs were created using whole census tracts, from the 2010 census, within PUMAs. Since NTAs were not permitted to cross PUMA boundaries, this further restricted our ability to identify what may be thought of as historical neighborhood boundaries. Thus, users need to be cognizant of the reason why NTAs were created and the demographic/geographic constraints inherent in how they were configured. Despite these limitations, NTAs are a valuable summary level for use with both the 2010 Census and the American Community Survey (ACS). Regarding the decennial census, these geographic areas offer a good compromise between the very detailed data for census tracts (2,168) and the broad strokes provided by community districts (59). For the ACS, NTAs offer a statistically reliable alternative to the high sampling error that renders data for most individual census tracts unusable.	<a href="https://popfactfinder.planning.nyc.gov/features">https://popfactfinder.planning.nyc.gov/features</a>	Every 10 years	Yes	<a href="https://data.cityofnewyork.us/City-Government/Neighborhood-Tabulation-Areas-NTA-/cpf4-rkhq">https://data.cityofnewyork.us/City-Government/Neighborhood-Tabulation-Areas-NTA-/cpf4-rkhq</a>	N/A	
Department of City Planning (DCP)	Population Fact-Finder - Public Use Microdata areas (PUMAS)	The 2010 NYC Public Use Microdata Areas (PUMAs) are statistical geographic areas defined for the dissemination of Public Use Microdata Sample (PUMS) data. PUMAs have a minimum population of 100,000, are aggregated from census tracts, and approximate Community Districts (CDs), or combinations of CDs (There are 59 CDs and only 55 NYC PUMAs because of such combinations). This geography is also used for disseminating American Community Survey (ACS) estimates. These boundary files are derived from the US Census Bureau's TIGER project and have been geographically modified to fit the New York City base map.	<a href="https://popfactfinder.planning.nyc.gov/features">https://popfactfinder.planning.nyc.gov/features</a>	Every 10 years	Yes	<a href="https://data.cityofnewyork.us/Housing-Development/Public-Use-Microdata-Areas-PUMA-/cwiz-gcty">https://data.cityofnewyork.us/Housing-Development/Public-Use-Microdata-Areas-PUMA-/cwiz-gcty</a>	N/A

Department of City Planning (DCP)	ZOLA - Neighborhood Tabulation Areas (NTA)	Neighborhood Tabulation Areas (NTAs) were created to project populations at a small area level, from 2000 to 2030 for PlaNYC, the long-term sustainability plan for New York City. Since population size affects the error associated with population projections, these geographic units needed to have a minimum population, which we determined to be 15,000. This criterion resulted in combinations of neighborhoods that probably would not occur if one were solely designating boundaries of historical neighborhoods. Moreover, the neighborhood names associated with the neighborhood tabulation areas are not intended to be definitive. Another feature of the sustainability plan, was the creation of projections for Public Use Microdata Areas (PUMAs), which are approximations of New York City's Community Districts developed for use with the Census Bureau's Public Use Microdata Samples (PUMS). In order to make the boundaries consistent with PUMAs, NTAs were created using whole census tracts, from the 2010 census, within PUMAs. Since NTAs were not permitted to cross PUMA boundaries, this further restricted our ability to identify what may be thought of as historical neighborhood boundaries. Thus, users need to be cognizant of the reason why NTAs were created and the demographic/geographic constraints inherent in how they were configured. Despite these limitations, NTAs are a valuable summary level for use with both the 2010 Census and the American Community Survey (ACS). Regarding the decennial census, these geographic areas offer a good compromise between the very detailed data for census tracts (2,168) and the broad strokes provided by community districts (59). For the ACS, NTAs offer a statistically reliable alternative to the high sampling error that renders data for most individual census tracts unusable.	<a href="https://zola.planning.nyc.gov/">https://zola.planning.nyc.gov/</a>	Every 10 years	Yes	<a href="https://data.cityofnewyork.us/City-Government/Neighborhood-Tabulation-Areas-NTA-/cpf4-rkhq">https://data.cityofnewyork.us/City-Government/Neighborhood-Tabulation-Areas-NTA-/cpf4-rkhq</a>	N/A	
Department of City Planning (DCP)	ZOLA - Sidewalk Cafes (DZM)	This Line feature class is intended to be a spatial representation of the Sidewalk Cafe regulations in the New York City Zoning Resolution, Article 1, Chapter 4. Department of City Planning (DCP)	ZOLA - Transit Zones	Transit Zone boundaries are mapped to encompass neighborhoods that are dense, proximate to public transportation options, and where car ownership rates are lowest. Within the Transit Zone, no off-street parking spaces are required to be built for Income Restricted Housing Units (also referred to as IRHU) and Affordable Independent Residences for Seniors (also referred to as AIRS), and discretionary actions allow for the removal of parking spaces that were previously required, or the reduction of spaces that would normally need to be built for certain other housing types.	<a href="https://zola.planning.nyc.gov/">https://zola.planning.nyc.gov/</a>	As Needed	Yes	<a href="https://data.cityofnewyork.us/Transportation/Transit-Zones/cpcf-tcx3">https://data.cityofnewyork.us/Transportation/Transit-Zones/cpcf-tcx3</a>	N/A	
Department of City Planning (DCP)	ZOLA - Waterfront Access Plan	Waterfront Access Plans (WAPs) allow for the modification of waterfront public access area requirements to address unique conditions in specific areas. The area must consist of at least a full block or four acres with 600 feet or more of shoreline. A WAP adapts waterfront zoning regulations governing public access and height and setback requirements to the specific conditions and planning goals for a defined area. It can be used, for instance, to ensure seamless continuity of shore public walkways to be developed over time by multiple property owners.	<a href="https://zola.planning.nyc.gov/">https://zola.planning.nyc.gov/</a>	As Needed	Yes	<a href="https://data.cityofnewyork.us/Environment/Waterfront-Access-Plans/d9z4-v86m">https://data.cityofnewyork.us/Environment/Waterfront-Access-Plans/d9z4-v86m</a>	N/A

Department of City Planning (DCP)	Zoning Index Map - Zoning Map Index	Section zoning map index of New York City. This index is used to determine which zoning map is related to a specific geographic area in New York City. Zoning maps show the boundaries of zoning districts throughout the city. The maps are regularly updated after the City Planning Commission and the City Council have approved proposed zoning changes. The set of 126 maps, which are part of the Zoning Resolution, are displayed in 35 sections. Each section is identified by a number from 1 to 35 and is further divided into one to four quarters, each identified by a letter a, b, c or d (map 8d or 33c for example). Each map covers an area of approximately 8,000 feet (north/south) by 12,500 feet (east/west) or 100 million SF. Sections are approximately 16,000 feet (north/south) by 24,000 feet (east/west) or 400 million SF.	<a href="https://www1.nyc.gov/site/planning/zoning/index-map.page">https://www1.nyc.gov/site/planning/zoning/index-map.page</a>	As Needed	Yes	<a href="https://data.cityofnewyork.us/City-Government/Zoning-Map-Index-Section/bpt7-i8t8">https://data.cityofnewyork.us/City-Government/Zoning-Map-Index-Section/bpt7-i8t8</a>	N/A

Department of Finance (DOF)	Rent Freeze Program Report	The New York City Rent Freeze program is comprised of the Senior Citizen Rent Increase Exemption (SCRIE) and the Disability Rent Increase Exemption (DRIE). The program assists lowincome seniors and people with disabilities who reside in rent-regulated apartments or apartments subject to the Private Housing Finance Law. The SCRIE and DRIE benefits freeze recipients' rent and protect them from future increases. As housing costs continue to rise citywide, the Rent Freeze program helps New Yorkers remain in their homes.	<a href="https://www1.nyc.gov/site/rent-freeze/rent-freeze-reports.page">https://www1.nyc.gov/site/rent-freeze/rent-freeze-reports.page</a>	Every 2 years	No		Yes

Department of Sanitation (DSNY)	DonateNYC Resident Directory	A listing of places in NYC where residents can donate or find second-hand goods. By donating and reusing goods instead of discarding them, New Yorkers can greatly reduce waste, conserve energy and resources, save money, and help provide jobs and human services for New Yorkers in need. DonateNYC is an essential part of NYC's zero waste initiative, helping New Yorkers reach the goal of sending zero waste to landfills. Please note that in the face of economic hardship, and to ensure the City can continue to devote resources to essential safety, health, shelter, and food security needs, the New York City Department of Sanitation announced the suspension of the curbside composting program, beginning May 4, 2020. During the suspension, any food scraps and yard waste set out for composting will be collected as trash. The suspension is currently planned through June 30, 2021.	<a href="https://www1.nyc.gov/assets/dsny/site/resources/statistics/monthly-dsny-curb-side-collections">https://www1.nyc.gov/assets/dsny/site/resources/statistics/monthly-dsny-curb-side-collections</a>	Monthly	Yes	<a href="https://data.cityofnewyork.us/City-Government/DSNY-Monthly-Tonnage-Data/ebb7-mvp5">https://data.cityofnewyork.us/City-Government/DSNY-Monthly-Tonnage-Data/ebb7-mvp5</a>	N/A

Department of Sanitation (DSNY)	DSNY Planned Commercial Waste Zones	On November 20, 2019, Mayor de Blasio signed into law LL199 of 2019, requiring the establishment of Commercial Waste Zones throughout New York City. The result of years of planning, analysis, and stakeholder engagement by DSNY, the Commercial Waste Zones (CWZ) program will create a safe and efficient commercial waste collection system that advances the City's Green New Deal and zero waste goals while providing high-quality, low-cost service to NYC businesses. For more information, see: <a href="https://www1.nyc.gov/assets/dsny/site/resources/reports/commercial-waste-zones-plan">https://www1.nyc.gov/assets/dsny/site/resources/reports/commercial-waste-zones-plan</a> . The zone map did change slightly after DSNY adopted final rules in February 2020: <a href="https://rules.cityofnewyork.us/sites/default/files/adopted_rules_pdf/cwz_map_final_rule_-_2-7-20_-_legal_10594369.pdf">https://rules.cityofnewyork.us/sites/default/files/adopted_rules_pdf/cwz_map_final_rule_-_2-7-20_-_legal_10594369.pdf</a> . The map presented here reflects the changes made when the final rules were adopted. Pre-COVID, DSNY was expecting to release the RFP for servicing the zones in May 2020 and enter into the long-term contracts in early 2021. With the enormous disruptions to commercial establishments and the carting industry from the pandemic and economic shutdown, the program is on an indefinite pause until the industry is able to start recovering and stabilizing.	<a href="https://www1.nyc.gov/assets/dsny/site/resources/reports/commercial-waste-zones-plan">https://www1.nyc.gov/assets/dsny/site/resources/reports/commercial-waste-zones-plan</a>	As Needed	Yes	<a href="https://data.cityofnewyork.us/City-Government/DSNY-Planned-Commercial-Waste-Zones/8ev8-jjxq">https://data.cityofnewyork.us/City-Government/DSNY-Planned-Commercial-Waste-Zones/8ev8-jjxq</a>	N/A

Department of Sanitation (DSNY)	DSNY Waste Characterization: Citywide Subsort	<p>The Department conducted the 2017 NYC Residential, School, and NYCHA (NYC Housing Authority) Waste Characterization Study over three seasons: spring, summer, and fall. This study builds on decades of research and analysis into the evolving composition of NYC's waste stream. The study team hand sorted samples into 70 main sort categories. Sub-sorting of an additional 172 categories was conducted to get a more detailed understanding of the wide variety of plastic products in the waste stream, as well as a sub-set of Paper products. Results are presented in absolute terms as the quantity by weight of each material type. The quantity of each materials is calculated by applying the percent composition to the total quantity of DSNY collections for fiscal year 2017 (July 2016-June 2017).</p> <p>The residential characterization included four residential curbside collection streams: Refuse, Paper, MGP (metal/glass/plastic), and Organics.</p> <p>The school characterization included Refuse, Paper, and MGP streams collected on dedicated school collection routes. For the purposes of this study, DSNY did not characterize Organics separated for diversion but instead included organic waste in the school Refuse stream. The NYCHA characterization focused sample collection from the large compacting containers used by DSNY to collect Refuse at NYCHA's large campus-style developments.</p> <p>For more information about how DSNY conducted this study and previous waste characterization studies, see: <a href="https://www1.nyc.gov/assets/dsny/site/resources/reports/waste-characterization">https://www1.nyc.gov/assets/dsny/site/resources/reports/waste-characterization</a>. Department of Sanitation (DSNY)	DSNY Waste Characterization: Comparison Table	<p>The Department conducted the 2017 NYC Residential, School, and NYCHA (NYC Housing Authority) Waste Characterization Study over three seasons: spring, summer, and fall. This study builds on decades of research and analysis into the evolving composition of NYC's waste stream.</p> <p>DSNY conducted previous waste characterization studies in 1990, 2005, and 2013. Each of these studies share a similar methodology of waste sampling and sorting but also included different targeted analyses to characterize particular components of the waste stream.</p> <p>The 2005 study examined residential curbside collection of commingled paper and cardboard recycling (Paper); MGP (metal/glass/plastic); and trash (Refuse) that provided statistical results by housing density and income levels throughout NYC. The 2005 study also included a characterization of the contents of street litter baskets.</p> <p>The 2013 study surveyed residential curbside Paper, MGP, and Refuse collections providing statistical results by borough for the City as a whole, but not by housing density and income levels. The 2013 study also included a detailed characterization of discarded plastics, as well as food and beverage containers.</p> <p>The 2017 study followed the same methodology for residential curbside collections as the 2013 study but included residential curbside collection of organics waste (Organics), NYC's new service to recycle food scraps, food-soiled paper, and yard waste. The 2017 study also characterized collection for both NYC public schools and NYC Housing Authority buildings to create a baseline view of waste generation from these sources. The 2017 study included a detailed analysis of plastics using the same method as the 2013 study. It also included a more detailed analysis of certain paper products.</p> <p>For more information about how DSNY conducted this study and previous waste characterization studies, see: <a href="https://www1.nyc.gov/assets/dsny/site/resources/reports/waste-characterization">https://www1.nyc.gov/assets/dsny/site/resources/reports/waste-characterization</a>. Department of Transportation (DOT)	Adopt-a-Highway Service Ratings	DOT offers an Adopt-a-Highway program, which allows individuals, companies or organizations to ensure clean and beautiful roadways. The Adopt-a-Highway Service Rating is a service task evaluation conducted by the Adopt-a-Highway staff of DOT. Service tasks include litter removal, mechanical sweeping and beautification and can vary by segment. DOT sets both the service (task) for the adopted segment and the level of service (i.e., frequency) to be provided by the contractor.	<a href="https://www1.nyc.gov/html/dot/html/about/datafeeds.shtml#highways">https://www1.nyc.gov/html/dot/html/about/datafeeds.shtml#highways</a>	Annually	Yes	<a href="https://data.cityofnewyork.us/Transportation/Adopted-Highway-Service-Ratings-Adopt-a-Highway-Hi/dte3-kvx7">https://data.cityofnewyork.us/Transportation/Adopted-Highway-Service-Ratings-Adopt-a-Highway-Hi/dte3-kvx7</a>	N/A	
Department of Transportation (DOT)	Alternate Side Parking	The City suspends alternate side parking (street cleaning) regulations, for both street cleaning purposes and traffic flow, on the 34 legal and religious holidays. This includes suspension of street cleaning regulations at metered spaces. This policy is implemented jointly by the Department of Transportation, the Department of Sanitation, and the Police Department. On major legal holidays, No Stopping, No Standing, and No Parking regulations are suspended, except where those regulations are normally in effect seven days a week. On all other holidays, only Street Cleaning Rules are suspended. All other regulations remain in effect. Parking meter regulations will be suspended on major legal holidays.	<a href="http://www.nyc.gov/html/dot/html/about/datafeeds.shtml">http://www.nyc.gov/html/dot/html/about/datafeeds.shtml</a>	Weekly	No		No	Not Data- Image file

Department of Transportation (DOT)	Vision Zero - Crash Data	Fatality crash data is obtained from the New York City Department of Transportation (DOT) fatality database, which is populated by New York City Police Department (NYPD) data and maintained by DOT. Injury crash data is obtained from the Finest Online Record Management System (FORMS), which is maintained by the NYPD. Only crashes with valid geographic information are mapped. All crashes are mapped to the nearest intersection. Injuries and fatalities are grouped by intersection and summarized by month and year. This data is queried and aggregated on a monthly basis and is current as of the query date. Current year data is January to the end of the latest full month. All mappable crash data is represented on the simplified NYC street model. Crashes occurring at complex intersections with multiple roadways are mapped onto a single point. Injury and fatality crashes occurring on highways are excluded from the map	<a href="http://www.nyc.gov/html/dot/html/about/vz_datafeeds.shtml#crash">http://www.nyc.gov/html/dot/html/about/vz_datafeeds.shtml#crash</a>	Monthly	Yes	<a href="https://data.cityofnewyork.us/browse?-Data-Collection_Data-Collection=Vision+Zero+View+Data&amp;q=vzv">https://data.cityofnewyork.us/browse?-Data-Collection_Data-Collection=Vision+Zero+View+Data&amp;q=vzv</a>	N/A

Department of Transportation (DOT)	Vision Zero - Speed Limits	On November 7, 2014, New York City's default speed limit was changed from 30 mph to 25 mph. Unless otherwise signed, all streets in New York City are governed by this 25 mph speed limit. Driving at or below 25 MPH decreases stopping distance, gives drivers and pedestrians more time to see each other and react, and improves drivers' ability to avoid crashes. Pedestrians struck by vehicles traveling at 25 MPH are half as likely to die as those struck at 30 MPH. If crashes do occur, the severity of injuries is reduced at lower speeds. The information shown here was compiled by the New York City Department of Transportation for governmental purposes. The information is updated as soon as reasonably practicable. The public is advised that speed limits are subject to temporary or permanent change and that posted signage must be observed for compliance with laws and regulations.	<a href="http://www.nyc.gov/html/dot/html/about/vz_datafeeds.shtml#crash">http://www.nyc.gov/html/dot/html/about/vz_datafeeds.shtml#crash</a>	Monthly	Yes	<a href="https://data.cityofnewyork.us/browse?-Data-Collection_Data-Collection=Vision+Zero+View+Data&amp;q=vzv">https://data.cityofnewyork.us/browse?-Data-Collection_Data-Collection=Vision+Zero+View+Data&amp;q=vzv</a>	N/A	
Department of Transportation (DOT)	Vision Zero - Street Improvement Projects (Corridors)	Safety-oriented engineering improvements that use multiple treatments (signals, markings, concrete etc.) on both corridors and intersections. Improvements are generally aimed at better organizing traffic, improving travel times, creating shorter, safer pedestrian crossings, and safe routes for bicycle travel. Landmarks Preservation Commission (LPC)	Designated and Calendared Buildings and Sites	This dataset contains information on all items designated or under consideration for designation (i.e. calendared) by the New York City Landmarks Preservation Commission (LPC). The dataset contains records for each individual, scenic, or interior landmark, as well as properties or sites located within the boundaries of historic districts. Please note that points in this dataset represent individual buildings in addition to non-building sites (such as vacant lots or monuments) regulated by LPC. It is possible for a single property to have multiple designations (such as individual and interior designations, or individual and historic district). For this reason, it is not uncommon to see multiple points on a single tax lot and multiple records for a single property within the database. Please pay close attention to the "MOST_CURRENT," "BBL_STATUS" and "LAST_ACTION_ON_LP" fields, which together denote the designation status of a site/property (see Attribute Definitions for more information). The geographic locations of the points in this dataset are derived primarily from the Department of City Planning's PLUTO data in combination with the Department of Information Technology & Telecommunication's building footprint information. Because this dataset is not automatically updated when changes occur in the underlying dataset, BIN numbers and tax lot information are potentially out of date. Please pay close attention to the field descriptions present in the file's metadata to understand how to use this data set.	<a href="http://maps.nyc.gov/doitt/nycitymap/">http://maps.nyc.gov/doitt/nycitymap/</a>	As Needed	Yes	<a href="https://data.cityofnewyork.us/Housing-Development/Designated-and-Calendared-Buildings-and-Sites/ncre-qhxs">https://data.cityofnewyork.us/Housing-Development/Designated-and-Calendared-Buildings-and-Sites/ncre-qhxs</a>	N/A

Please pay close attention to the "CURRENT" and "LAST_ACTION_ON_BOUNDARY" fields to determine the status of a particular area. Mayor's Office of Contract Services (MOCS)	HHS Prequalification Reporting	Provider organizations that have been prequalified to compete for City funding in specific health and human services areas. In HHS Accelerator, the City's system for procuring health and human services, prequalification is based on: experience providing the service; a key staff member able to provide the service; or a capability statement describing the organization's ability to expand into the service area. Prequalification in a service area does not necessarily indicate that an organization currently provides the service at this time. Addresses provided below indicate the organization's administrative office, and may not be the location at which services are provided. # FOIL Metrics

## Local Law 244 of 2017: Freedom of Information Law Responses

Local Law 7 of 2016 requires agencies to “review responses to freedom of information law [FOIL] requests that include the release of data to determine if such responses consist of or include public data sets that have not yet been included on the single web portal or the inclusion” on the Open Data Portal. Additionally, each City agency shall disclose “the total number, since the last update, of such agency’s freedom of information law responses that included the release of data, the total number of such responses determined to consist of or include a public data set that had not yet been included on the single web portal and the name of such public data set, where applicable, and the total number of such responses that resulted in voluntarily disclosed information being made accessible through the single web portal.”
